

Q use web to access without
again and again
your role is used instead of group

LAB 1

check with users, groups, roles
and how permission works

MODULE - 2

AWS compute

VM (EC2)

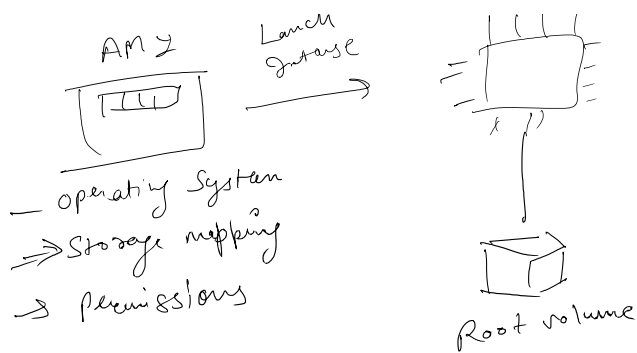

Containers

→ Lambda

Elastic Compute Services

- secure and resizable compute capacity
- Provision and launch in minute
- Pay for capacity by the hour or second

AMI → Amazon Machine Images
EC2 instance

EC2 Instance Types

- General purpose
- Compute optimized
- Memory optimized
- Accelerated Computing
- Storage optimized

EC2 cycle

- when you stop, you stop pay for service but data is still there so you are paying for that
- when you terminate all data is deleted

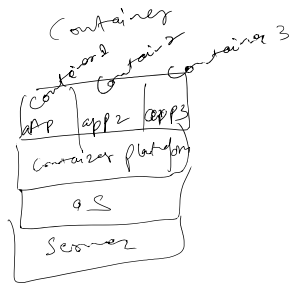

Pricing

→ free → 1 Million Lambda is free
you can search ~~it~~ on google
and you get more detail.

→ Savings plans

- Dedicated host
- on demand instance
- reserved instances
- spot instances

Diff b/w VM and Containers

AWS Containers Orchestration Services

Two Services

- Amazon ECS [Amazon Elastic Container Service]
- Amazon EKS [Amazon Elastic Kubernetes Service]

Serverless

- AWS Fargate → switch functions as containers → No max timeout
16 vCPU (max)
20 GB Ram
- AWS Lambda → function as service
(3sec is default timeout)
min memory = 128 MB
max timeout = 15 minutes

functions are regional not global

- you cannot use GPU on Fargate and Lambda
- we ~~don't~~ ^{services} know where it's running

- In Fargate you have to deal with patching, having more security
- In Lambda you can login
Fargate provides more security

If want to control hardware then
got to EC2

• Amazon Cloud
